Virginia 12, Princeton 10 | March 11, 2026 | Klöckner Stadium, Charlottesville | Non-Conference — W

---

1. Summary

This was a game we had no business nearly losing and a game that exposed exactly who we are right now: a team with elite draw control and individual talent that can look like two completely different squads within the same 60 minutes.

We scored first (39 seconds in), led 3-2 after Q1 thanks to 6 draw wins, then went SCORELESS in Q2 while Princeton rattled off 4 unanswered to take a 6-3 halftime lead.

The second quarter was the worst 15 minutes of lacrosse we've played since the Stanford collapse - 9 shots, 0 goals, and Amelia Hughes standing on her head with 6 saves while we fired ISO shots from distance with no ball movement.

Then the Q3 switch flipped. We shut Princeton out 4-0, retook the lead 7-6, and survived a wild Q4 (5-4) to win 12-10. Kate Galica was the difference - 5 goals, 11 draw controls, and the two clutch man-up goals in Q4 that broke the 9-9 tie.

What decided the game:

- Three things:
  - First, **draw control dominance** -- 19-3 is the most lopsided draw battle of the entire season. Princeton simply couldn't get the ball. We had 41 shots to their 21 because of this. But having the ball means nothing if you can't finish, which leads to...
  - Second, **the Q2-to-Q3 offensive transformation.**
    - In Q2, we played ISO lacrosse — Dinardo forcing shots from distance (4 saves by Hughes on his attempts), Galica shooting into traffic, Alaimo turning it over twice before getting carded.
    - In Q3, we moved the ball: Galica combined with Allen and Alaimo, we attacked gaps instead of shooters, and scored 4 on 5 SOG. The coaching adjustment at halftime — or the team's own reset — was the game.
  - Third, **Galica's Q4 takeover.** Down 9-9 after Sloan's MU/FPG, Galica scored back-to-back man-up goals (6:52 FPG, 5:14 with Alaimo assist) to make it 11-9. Then forced a Princeton clear failure at 1:26 and grabbed her own rebound off the post at 1:17. She willed the win.

Was this a process win or results win?

- Results win. The process was badly flawed for 15 minutes (Q2) and shaky for portions of Q4.
  - The good process: 19-3 draws, 6 turnovers (season-low), 100% clearing (11-11), 41 shots generated, Q3 shutout.
  - The bad process: 0-for-Q2 offensively (ISO ball, no movement, shooting from distance into Hughes), 3 green cards (Flaherty Q1, Alaimo Q2, Laverghetta Q4 — all led to Princeton goals or opportunities), Princeton's 10 goals on 15 SOG (66.7% conversion = our defense was leaking), Finnelle's 5 saves / 33.3% (sharp regression from back-to-back 58.8% games).
  - The persistent issues: Alaimo's turnovers (4 — back up from 2 vs FSU), Dinardo's ball distribution (throws it away rather than finding the open player), and defensive breakdowns on Princeton's passing game.

Performance Grades:

OFFENSE	DEFENSE	TRANSITION	DRAW UNIT	GOALKEEPING	DISCIPLINE
B	C+	B-	A+	D+	C

Unit	Grade	Rationale
Offense	B	• 12 goals on 41 shots — but 27 SOG on 41 attempts (65.9% accuracy) is our worst of the season. • Hughes saved 15. Q2 was an F. Q3-Q4 was an A. Galica 5G carried us.
Defense	C+	• Allowed 10 goals on 15 SOG (66.7% conversion). • Princeton's passing carved our slides. Dora 4A exploited every gap. Only saving grace: Q3 shutout (0 goals allowed on 4 shots).
Transition	B-	• 100% clearing (11-11). Princeton only 77.8% (14-18) — we forced 4 failed clears. • But no fast breaks and no transition goals.
Draw Unit	A+	• 19-3. Season-best. Galica 11, Dinardo 4, Reilly 4. Princeton's draw unit was non-existent.
Goalkeeping	D+	• Finnelle: 5 saves, 33.3%. Sharp regression. 10 GA on 15 SOG.

Unit	Grade	Rationale
		• Princeton's finishing was clinical but Finnelle was beaten too easily on several plays.
Discipline	C	• 3 green cards. Each one cost us: Flaherty Q1 → Sloan MU goal. Alaimo Q2 → Sloan MU/FPG. Laverghetta Q4 + Kology foul → Sloan MU/FPG tying it 9-9.

🚀 **Q1 Fast Start Again — 1-0 in 39 Seconds** +8.2%

Reilly won the opening draw, and Dinardo scored at 14:21 → 1-0. Second consecutive game scoring first. Galica won the next draw. But Alaimo immediately turned it over, and Flaherty got a green card at 13:18 — giving Princeton a man-up. Sloan (Dora) converted at 12:41 → 1-1. Classic Virginia: score, then gift it back. Allen answered at 10:10 → 2-1, and Galica at 2:21 → 3-2. Won Q1 3-2 but should have been 4-1 or better given 6 draw wins.

💀 **Q2 Collapse — 0 Goals, 4 Conceded, Hughes Stood on Her Head** -38.6%

The worst quarter of the season. Virginia had 9 SHOTS and scored ZERO goals. Hughes made 6 saves including FP saves on Galica (9:15), Alaimo (8:11), Dinardo (5:22), and settled saves on Sfreddo, Dinardo, and Galica. We were playing ISO lacrosse — going individually, shooting from distance, not moving the ball. Meanwhile Princeton scored 4: Sloan MU/FPG (9:18, off Alaimo's green card), Morrisroe (6:22, Sloan assist), MacDonald (2:42, Dora assist), Bacigalupo (2:02, Dora assist). The last two goals came 40 seconds apart. Haven Dora had 3 assists in Q2 alone. Princeton's passing was effortless — they found seams our defense couldn't close. WP crashed from ~68% to ~18%. Timeout called at 2:02. Down 3-6 at half.

🔥 **Q3 Shutout Comeback — 4-0 Run to Retake the Lead** +52.8%

The defining quarter. Dinardo won the opening draw. Flaherty FPG at 12:21 → 4-6. Just 36 seconds later, Galica scored (Allen assist) at 11:45 → 5-6. The offense changed — ball movement, off-ball cuts, Galica combining with others instead of going ISO. Princeton failed a clear at 10:24 (Hughes TO). Galica scored again at 4:53 (Alaimo assist) → 6-6. Then Dinardo at 1:18 → 7-6. Four unanswered goals. Princeton had ZERO goals on 4 shots. Finnelle saved Sloan and Quinn. We won GBs 7-4, draws 4-1. This was the Q3 from the Pitt game all over again — dominant when locked in.

⚡ **Q4 Heavyweight Fight — 5-4 Quarter, Galica Takes Over** +14.8%

Wild quarter. Allen opened → 8-6. Bacigalupo answered → 8-7. Piraino (Alaimo) → 9-7. Bacigalupo again → 9-8. Then Laverghetta green card at 9:14 + Kology foul → Sloan MU/FPG at 8:16 → 9-9. TIED. Princeton timeout. This was the crisis moment — WP dropped to ~42%. Then Galica: MU/FPG at 6:52 → 10-9 (off Roberts yellow card). Galica again MU (Alaimo) at 5:14 → 11-9. Morrisroe cut it to 11-10 at 4:11. But Piraino (Alaimo) sealed it at 3:17 → 12-10. Virginia timeout. Galica forced a failed Princeton clear at 1:26, hit post at 1:17, grabbed her own rebound. Molnar yellow at 0:05. Allen FP shot high. FINAL 12-10.

⭐ **Kate Galica: 5G-0A-11DC — Player of the Game** +22.4%

Career-high 5 goals. 11 draw controls (86.4% of team total, 19-3 overall). 11 shots, 8 SOG, 4 ground balls. She scored the go-ahead goals in Q1, Q3, and twice in Q4 (both man-up). When she combined with Alaimo in Q3-Q4 she was lethal (Alaimo assisted 2 of her goals). The crossbar hit at Q3 10:59 and post hit at Q4 1:17 — she was inches from 7 goals. She also caused a key Princeton turnover in Q4 (Allen at 1:26) that sealed the game. This is All-American play.

🥅 **Hughes (Princeton): 15 Saves, 55.6% — Their MVP** -12.4%

Amelia Hughes was extraordinary. 15 saves on 27 SOG. She saved 6 shots in Q2 alone including 3 free position attempts. She saved 5 in Q3 when we were surging. She channeled balls to her wings effectively and our shooters couldn't exploit her off-stick side. Without Hughes, this is a 18-10 game. Scouting note: when we finally started placing shots (Q3-Q4) instead of blasting from distance (Q1-Q2), our conversion improved dramatically.

🔒 **Defensive Breakdowns — Princeton's Passing Carved Us** -8.8%

Princeton scored 10 goals on only 15 SOG (66.7% conversion). Haven Dora had 4 assists — she found cutters every time. Sloan (3G-3A = 6PTS) and Bacigalupo (3G) exploited late slides and ball-watching. The Q2 collapse (4 goals conceded) was defensive as much as offensive — we couldn't close passing lanes. Dora-to-Bacigalupo at 2:02 (just 40 seconds after MacDonald's goal) showed zero defensive reset. Finnelle's 5 saves / 33.3% is the lowest of the recent run.

---

2. Game Flow & Momentum Analysis

- **First 5 Minutes**
  - Strong start -- Reilly won the opening draw, Dinardo scored at 14:21 → 1-0 (39 seconds in). Second straight game scoring first.
  - But then Alaimo immediately turned it over, Flaherty got a green card at 13:18, and Sloan converted the man-up at 12:41 → 1-1. Pattern: score, self-inflict.?
  - Allen restored the lead at 10:10 → 2-1 off a MacDonald turnover forced by Reilly. Good response.
- **The Q2 Disaster (0-4)**
  - This was the critical failure. Nine shots, zero goals.
  - Hughes saved everything — Sfreddo (11:30), Alaimo FP (8:11), Dinardo (7:10), Dinardo FP (5:22), Galica (3:32), Galica (0:47).

- The problem wasn't shot volume — it was **shot quality.**
  - We were shooting from distance, going ISO, trying to beat Hughes from the top of the arc rather than moving the ball and attacking from the wings or crease.
  - Hughes was set, square, and ready on every shot because our shooters were telegraphing from the same angles.
- Meanwhile, Princeton scored 4: Sloan MU/FPG (9:18, off Alaimo's green card), Morrisroe (6:22, Sloan assist), MacDonald (2:42, Dora assist), Bacigalupo (2:02, Dora assist).
- The last two came 40 seconds apart — Haven Dora had 3 assists in Q2 and Princeton's ball movement was everything ours wasn't. Quick passes, diagonal cuts, exploiting our late slides. Timeout called at 2:02 (down 3-6). WP cratered from ~68% to ~18%.

The Q3 Transformation (4-0)

- **Ball movement replaced ISO.** Galica's goal at 4:53 came off an Alaimo assist — ball was reversed twice before the final pass. The Allen-to-Galica goal at 11:45 involved off-ball movement that created space.
- **Shot placement improved.** Instead of blasting from distance, we attacked closer and placed shots. Flaherty's FPG at 12:21 was composed. Dinardo's goal at 1:18 came after patient possession.
- **Defense locked in.** Princeton had 4 shots, 0 goals. Finnelle saved Sloan (13:36) and Quinn (9:21). Finnelle also caused a Dora turnover at 6:30. The back line was tighter and communication improved.
- Four unanswered goals. WP rose from ~18% to ~72%. This Q3 performance mirrors the Pitt Q3 (5-1) and FSU Q3 (5-2) — we are a third-quarter team.

The question remains: **why can't we play like this for 60 minutes?**

Q4 Rollercoaster

- Allen → 8-6. Bacigalupo → 8-7. Piraino (Alaimo) → 9-7. Bacigalupo (Sloan) → 9-8. Then: Laverghetta green card at 9:14 + Kology foul → Sloan MU/FPG at 8:16 → **9-9**. Princeton timeout.
- The crisis moment. WP dropped to ~42%. This team has been here before — down 6-7 vs Notre Dame Q4, down 9-7 vs Pitt Q4. Both times, we responded.

  This time:

  - Galica MU/FPG at 6:52 → 10-9 (off Roberts yellow card). Galica MU (Alaimo) at 5:14 → 11-9. Morrisroe cut it to 11-10 at 4:11.

- But Piraino sealed it at 3:17 (Alaimo assist) → 12-10. Then Galica forced a failed Princeton clear at 1:26, hit post at 1:17, grabbed her own rebound. Clock ran out. Win.

---

3. Offensive Analysis

- **Shot Volume vs Quality — The Core Issue**
  - 41 shots is the most we've taken all season. But 27 SOG on 41 attempts (65.9% accuracy) is our worst.
  - And 12 goals on 27 SOG (44.4% conversion) is below our recent standard (68.2% vs FSU, 52.6% vs Pitt).
  - Hughes' 15 saves (55.6%) tell the story — we made her job easy in Q1-Q2 by shooting predictably.
- **The Q2 problem in detail:**
  - 9 shots, 6 on goal (66.7% accuracy), 0 goals (0% conversion). Hughes saved all 6.
  - Film review shows: all 6 saves came from shots taken centrally or from the top of the arc. Zero shots from the crease, zero shots from the wings.
  - We were playing ISO and letting Hughes see everything. Dinardo in particular took 4 of the 9 Q2 shots — all from the same angle, all saved or wide.
- **The Q3-Q4 solution:**
  - 23 shots, 15 on goal, 9 goals (60% conversion on SOG). The difference: ball movement. Galica's Q3 goals involved assists (Allen, Alaimo). We attacked different angles. We took shots from closer range after dodges created space.

Player Offensive Assessment

Player	Stats	Assessment
Kate Galica	5G-0A-5PTS, 11 SH, 8 SOG, 11 DC	• Player of the game. 5 goals including 2 clutch man-up goals in Q4. • Hit crossbar Q3 and post Q4 — could have been 7 goals. • When she combined with Alaimo she was lethal. When she went ISO (Q1-Q2), she was mortal. The lesson is clear.
Jenna Dinardo	2G-0A-2PTS, 10 SH, 6 SOG, 4 DC	• 10 shots but only 6 on goal (60%) — worst accuracy of any starter. • Hughes saved 4 of his 6 SOG. She's not a distributor — she throws away the ball randomly rather than finding the open player. 2 turnovers in Q3 killed momentum. Needs film on when to

Player	Stats	Assessment
		shoot vs when to pass.
Fiona Allen	2G-1A-3PTS, 5 SH, 2 SOG	Excellent off the bench again. • 2 goals including the Q4 opener that made it 8-6. The assist to Galica at Q3 11:45 was the catalyst for the comeback. • But 5 shots, only 2 on goal — she was spraying wide in Q2 (shot wide at 14:05).
Jayden Piraino	2G-0A-2PTS, 4 SH, 3 SOG	Clean performance. • 2 goals, 0 turnovers. The Q4 insurance goal at 3:17 (Alaimo assist) sealed the game. She's becoming reliable off the bench — consistent since the Pitt game.
Madison Alaimo	0G-4A-4PTS, 4 SH, 2 SOG, 4 TO	The tale of two halves. • Q1-Q2: 3 turnovers, a green card, 0 assists • Q3-Q4: 2 assists (Galica Q3, Galica Q4), plus the Piraino assist at Q4 3:17. When she distributes, we win. When she holds the ball, we lose. 4 turnovers is a regression from FSU (2) and Pitt (1).
Cady Flaherty	1G-0A-1PTS, 2 SH, 2 SOG	• FPG at Q3 12:21 started the comeback. But the green card at Q1 13:18 directly led to Sloan's MU goal. Net impact: roughly neutral.
Gabby Laverghetta	0G-0A, 2 SH, 2 SOG	• Cold after the 4-goal FSU game. Both shots saved by Hughes. The green card at Q4 9:14 was costly — combined with Kology's foul, it led to Sloan's game-tying 9-9 MU/FPG.

---

4. Defensive Analysis

The Problem: Princeton's Passing

- Princeton scored 10 goals on only 15 shots on goal — 66.7% conversion rate. That's the highest any opponent has converted against us this season. The issue wasn't Princeton's individual talent — it was their team passing. Haven Dora had 4 assists, Ella Sloan had 3 assists (plus 3 goals). They moved the ball faster than our defense could rotate.

- The Q2 sequence at 2:42-2:02 was the worst example: MacDonald scored (Dora assist), then Bacigalupo scored 40 seconds later (Dora assist). Zero defensive reset between goals. Our defenders were ball-watching, not tracking cutters.

Matchup Assessment

- **vs Ella Sloan (3G-3A = 6PTS):** Lost badly. She was their engine — scored on MU/FPG situations and created for others with 3 assists. All 3 of her goals came on man-up or FP situations created by our fouls.
- **vs Maggie Bacigalupo (3G):** Lost. All 3 goals came from the crease area off assists (MacDonald Q2, Dora Q2, Sloan Q4). She exploited late slides every time.
- **vs Haven Dora (4A):** Lost the chess match. Dora never shot but orchestrated 4 of 10 Princeton goals. She found gaps in our defense repeatedly — especially in Q2 where she had 3 assists.

Caused Turnovers

- 7 caused turnovers: Reilly 1 (MacDonald Q1), Schneider 1 (MacDonald Q1), Demark 1 (Dora Q2), Alaimo 1 (Dylan Allen Q2), Finnelle 1 (Dora Q3), White 1 (Sloan Q3), Galica 1 (Dylan Allen Q4). Better than recent games — but our defense is generating turnovers through individual effort, not system pressure.

---

5. Draw Control — Historic Dominance

- **19-3.** The most lopsided draw battle of the season by a wide margin.
- Galica: 11 (Q1: 4, Q2: 3, Q3: 1, Q4: 3). Dinardo: 4 (Q1: 1, Q3: 2, Q4: 1). Reilly: 4 (Q1: 1, Q2: 1, Q3: 1, Q4: 1).
- Princeton: Roberts 1 (Q2), Morrisroe 1 (Q3), Ward 1 (Q4 — listed as Lydia Ward in box score, unclear).

This is the most dominant draw performance of the season. Galica's 11 DCs matches her FSU output. But the crucial lesson: **draw dominance means nothing without offensive execution.** In Q2, we won 3 draws and scored 0 goals. Possession ≠ production when the offense is playing ISO.

---

6. Goalkeeper Performance — Elyse Finnelle

Minutes: 60:00 | GA: 10 | Saves: 5 | Save %: 33.3%

Saves by Quarter: Q1: 0 (listed), Q2: 2, Q3: 1, Q4: 2

This is a significant regression from the back-to-back 58.8% performances vs Pitt and FSU. Princeton put 15 SOG on frame and scored 10 — Finnelle saved only 5. Several of the goals came from close range off Princeton's passing game, which means the defense was the primary issue. But 33.3% is Stanford-level save rate and needs attention.

Trend

Metric	vs Pitt	vs FSU	vs Princeton	Trend
GA	7	7	10	↓
Saves	10	10	5	↓↓
Save %	58.8%	58.8%	33.3%	↓↓
SOG Faced	17	17	15	↓ (fewer but more lethal)

The positive: Finnelle caused a Dora turnover in Q3 (6:30), saved Quinn in Q3, and contributed 4 ground balls. She was active outside the cage. The problem is shot-stopping when Princeton's passing created clean looks.

---

7. Discipline

Cards

Virginia: 3 green cards (Flaherty Q1, Alaimo Q2, Laverghetta Q4). **Each one directly led to a Princeton goal or scoring opportunity.**

- Flaherty Q1 13:18 → Sloan MU goal at 12:41 (1-1)
- Alaimo Q2 10:10 → Sloan MU/FPG at 9:18 (3-3)
- Laverghetta Q4 9:14 + Kology foul → Sloan MU/FPG at 8:16 (9-9)

That's 3 goals directly attributable to our cards. In a 12-10 game, those 3 goals are the difference between a comfortable win and a nail-biter. Ella Sloan scored ALL 3 of her goals on man-up situations. We literally gave her the game.

Princeton: 2 yellow cards (Roberts Q4 6:48, Molnar Q4 0:05). Both came late when Virginia was in control.

---

8. Advanced Metrics

Metric	Virginia	Princeton	Notes
Est. Possessions	~30	~22	Massive possession edge from draws
Offensive Rating (G/100 poss.)	~40	~45.5	Princeton was MORE efficient per possession
Defensive Rating	~45.5	~40	Princeton's defense (Hughes) outperformed
Turnover Rate	20% (6/~30)	45.5% (10/~22)	Season-best TO rate
Shot Gen Rate	136.7% (41/~30)	95.5% (21/~22)	We generated 2× more shots per possession

Metric	Virginia	Princeton	Notes
SOG Rate	65.9% (27/41)	71.4% (15/21)	Princeton was more accurate
Save %	33.3%	55.6%	Hughes was the difference
Draw Win %	86.4% (19/22)	13.6% (3/22)	Historic dominance
Clear %	100% (11/11)	77.8% (14/18)	Forced 4 failed clears

The key insight:

We had a +8 possession advantage (~30 vs ~22) but Princeton's offensive efficiency (45.5 goals/100 possessions) was HIGHER than ours (~40). They did more with less because their passing created high-quality chances. We had volume but not quality — especially in Q2.

---

9. Film Room Emphasis Plan

5 Clips We Must Show

1. **Q2 vs Q3 Side-by-Side.** Show Q2 ISO shooting (Dinardo from distance, Galica into traffic, no passes) next to Q3 ball movement (Allen-to-Galica, Alaimo-to-Galica, off-ball cuts). Same team, same opponent, completely different offense. Ask: "What changed?"

2. **Princeton's Q2 Passing Game (Dora's 3 assists).** Show Dora finding Morrisroe, MacDonald, and Bacigalupo in sequence. Identify where our slides were late and where cutters were left free. This is what good teams do to us.

3. **The 9-9 Crisis Sequence.** Laverghetta green card (9:14) → Kology foul → Sloan MU/FPG (8:16) → Princeton timeout → Galica MU/FPG (6:52) → Galica MU (5:14). Show the cost of the card AND the response. Both lessons matter.

4. **Hughes' 6 Q2 Saves.** Show where each shot was placed. Every one came from central/top-arc position. Show what happens when you shoot into the goalie's strength zone vs when you attack wings and low corners (Q3-Q4).

5. **Dinardo's 10 Shots.** Show all 10. 4 wide, 4 saved, 2 goals. He's forcing shots when covered. When he sees a clean look, he finishes. When he doesn't, he fires anyway. He needs the pass option drilled.

3 Clips We Celebrate

1. **Galica's Q4 Takeover.** FPG at 6:52, MU goal at 5:14, forced turnover at 1:26, hit post and own rebound at 1:17. Four plays. That's a closer mentality.

2. **Q3 4-0 Shutout.** Full quarter. This is the identity when we're locked in.

3. **Piraino's 12-10 Dagger at 3:17.** Alaimo assist, clean finish. Insurance goal when Princeton was creeping back. Composure.

1 Culture Moment

The halftime reset. Down 3-6, going into the locker room after a scoreless quarter, and coming out to score 4 unanswered. That's character. That's growth. Five games ago (Stanford), this team would have folded. Today, they fought back from 3 goals down. Show Q3 opening → Dinardo draw win → Flaherty FPG → Galica goal. "This is what we look like when we stop playing for ourselves and start playing for each other."

Bottom Line

A ugly win is still a win. Virginia 12, Princeton 10 — but this game exposed both the best and worst of this team.

The best: 19-3 draw dominance (Galica 11). Season-low 6 turnovers. 100% clearing. Kate Galica's 5-goal, 11-draw masterclass. A 4-0 Q3 shutout comeback from 3-6 down. Clutch Q4 man-up execution.

The worst: A scoreless Q2 where we played ISO lacrosse and let Hughes save 6 shots. Princeton scoring 10 on 15 SOG because our defense couldn't handle their passing. Three green cards that directly produced 3 Princeton man-up goals. Finnelle's save rate dropping to 33.3%. Alaimo's turnovers back up to 4.

The trajectory:

Metric	Stanford	Pitt	FSU	Princeton	Direction
Turnovers	15	16	13	6	✅ Improving
Draw Win %	63%	68%	67%	86%	✅ Dominant
Cards	4	6	1	3	⚠️ Inconsistent
Finnelle SV%	33%	59%	59%	33%	⚠️ Regression
Alaimo TOs	8	1	2	4	⚠️ Regression
Goals Scored	8	10	15	12	✅ Trending up

We're 5-4. The draw circle is elite. The offense has weapons. The defense needs to solve passing teams. And we need to stop giving opponents man-up goals by carding ourselves at critical moments.

The Q2 lesson is the most important one from this game: **when we play ISO, we lose. When we move the ball, we win.** The entire offensive game plan going forward should be built around that truth.

Prepared by Virginia Athletics — Women's Lacrosse Analytics Staff Game Data Source: Official NCAA Box Score & Play-by-Play — Princeton at Virginia, 3/11/2026
